DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kwan (U.S. patent # 5,309,349) in combination with Platnic (U.S. Patent # 6,049,474) and Hirono et al. (U.S. patent # 6,646,411 B2).

Kwan discusses claimed invention a current detection unit (figures 1,2a-2f, 3 and 6), including a three-phase AC power output, a DC power (figure 3, item E), an inverter (column 2, line 25-40), a current detection unit (figure 3, item 32). However Kwan does not disclose the utilization of the technique for a time measurement and a current phase detection means. Platnic teaches the utilization of similar technique for a time measurement (column 3, line 25-65) and Hirono et al. teaches the utilization of the technique for a current phase detection (Abstract, line 1-10). It would have been obvious one having an ordinary skill in the art at the time the invention made to modify Kwan current measuring unit by utilizing the technique taught by Platnic and Hirono et al. for the purpose of providing a current detection method for DC to three-phase AC converter and reduction of cost.
